

Book: Pollen Flora of Karachi

Price 3000/- Rs (postage excluded)

Pollen Flora of Karachi, a new and comprehensive reference book, is a significant addition to the botanical literature of Pakistan. Authored by Prof. Dr. Anjum Perveen and Prof. Dr. M. Qaiser, this work provides a unique and important contribution by meticulously documenting the pollen of the region.

This publication builds upon the foundation laid by Jafri's 1966 *Flora of Karachi*, which documented approximately 413 plant species. The authors of *Pollen Flora of Karachi* have taken a new approach, providing detailed information on pollen flora through a thorough examination of exine patterns. This was achieved using both **scanning electron microscopy** and **light microscopy**, offering an in-depth look at the microscopic world of Karachi's flora. This makes the book an essential resource for botanists, researchers, and palynologist of the region.

Book is available in Centre for Plant Conservation (To order and purchase, please contact the email address cpc@uok.edu.pk).
