Read the passage to answer questions 5-6

The vast multitude of stars are wandering about in space. A few form groups which journey in company, but the majority are solitary travelers. And they travel through a universe so spacious that it is an event of almost unimaginable rarity for a star to come anywhere near to another star. For the most part each voyages in splendid isolation, like a ship on an empty ocean. In a scale model in which the stars are ships, the average ship will be well over a million miles from its nearest neighbor, whence it is easy to understand why a ship seldom finds another within hailing distance.

- 5. Which of the following is incorrect according to the passage?
 - A. Most of the stars travel in isolation
 - B. The universe is very large
 - C. A star very frequently comes near to another one
 - D. A star very rarely comes near to another one
